

Yeah, we can! If you would like to import in The Sims Medieval your old The Sims 3 pattern (or your favourite ones) you can do it! By the way you need to be careful because not all pattern's categories are the same in these two games... so you need to follow just few steps and you can go on... read more to know all!

First, what is different from The Sims 3 to The Sims Medieval:

1. **For now The Sims Medieval read only .package files.** So if you have some patterns in **.sims3pack**

file-type you need first to extract package files from them, for example as [explained here on Simpedia >>](#)

2. **Categories are not the same, in The Sims Medieval you can find:**

1. Fabric
2. Leather and Fur
3. Carpet and Rug
4. Wood
5. Metal
6. Weave and Wicker
7. Paint
8. Rock and Stone
9. Masonry
10. Miscellaneous

11. **So if your pattern is in one of the categories above, you have done. No operations are needed. On the contrary if your pattern category is different you need to edit it with [S3PE](#)**

. Here below we suggest you what to do.

How to install custom patterns in The Sims Medieval

You need to:

1. **Download the Resource.cfg file for The Sims Medieval.** You can find it

[HERE](#)

2. Extract the **Resource.cfg** from the RAR archive.
3. Put the Resource.cfg in:
Programs Files/Electronic Arts/The Sims Medieval

Written by CriCri

Saturday, 26 March 2011 18:33 - Last Updated Saturday, 26 March 2011 20:41

this mean where you have installed your game. We repeat, where you've INSTALLED the game.

4. Create here a new folder and rename it into **Mods**. Open it and create here another one, called **Packages**
5. Insert now in your **Packages** folder the mods you've downloaded.

Warning!!! The Sims 3 mods and custom contents are not compatible with The Sims Medieval, you can't use them. Only some patterns are compatible and you can use them. Read careful this page >>.

If you prefer a dummy method and you won't follow previous steps, you can download this file

[The Sims Medieval Resource.cfg + Folder structure](#)

After download just extract the file into *Programs Files/Electronic Arts/The Sims Medieval* (same folder where you have installed the game). Now you just need to follow the step nr. 5 of the above instructions.

Note: all patterns installed in this way aren't recognized as custom pattern from the game. You can't see special icon to identify them in the list, you have to search them.

How to edit a pattern and make it compatible with The Sims Medieval

We told that in The Sims Medieval we have less categories then in The Sims 3. There are available categories in The Sims Medieval:

1. Fabric
2. Leather and Fur
3. Carpet and Rug
4. Wood
5. Metal
6. Weave and Wicker
7. Paint
8. Rock and Stone
9. Masonry
10. Miscellaneous

If the category of your pattern is different you should edit it with [S3PE](#) to make it compatible. So open the file with S3Pe.

Now find the resource with

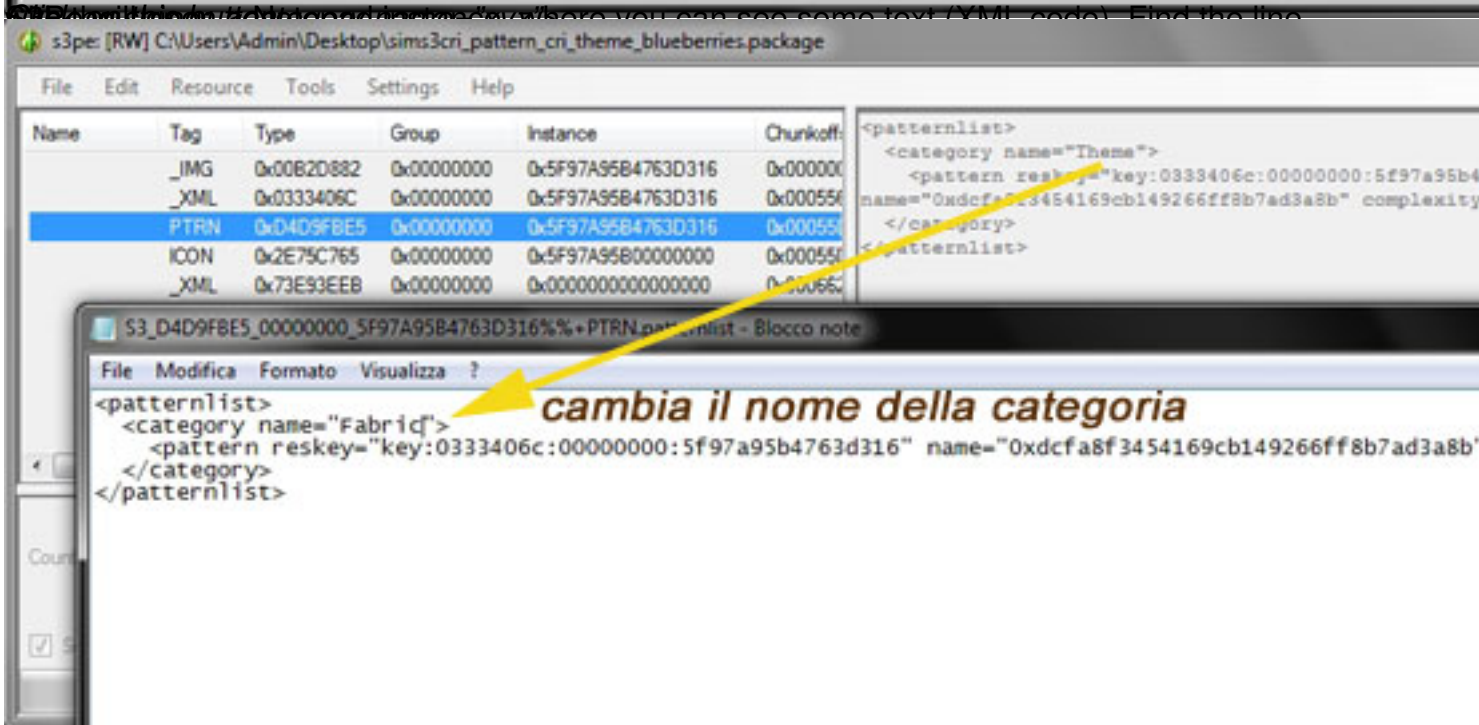

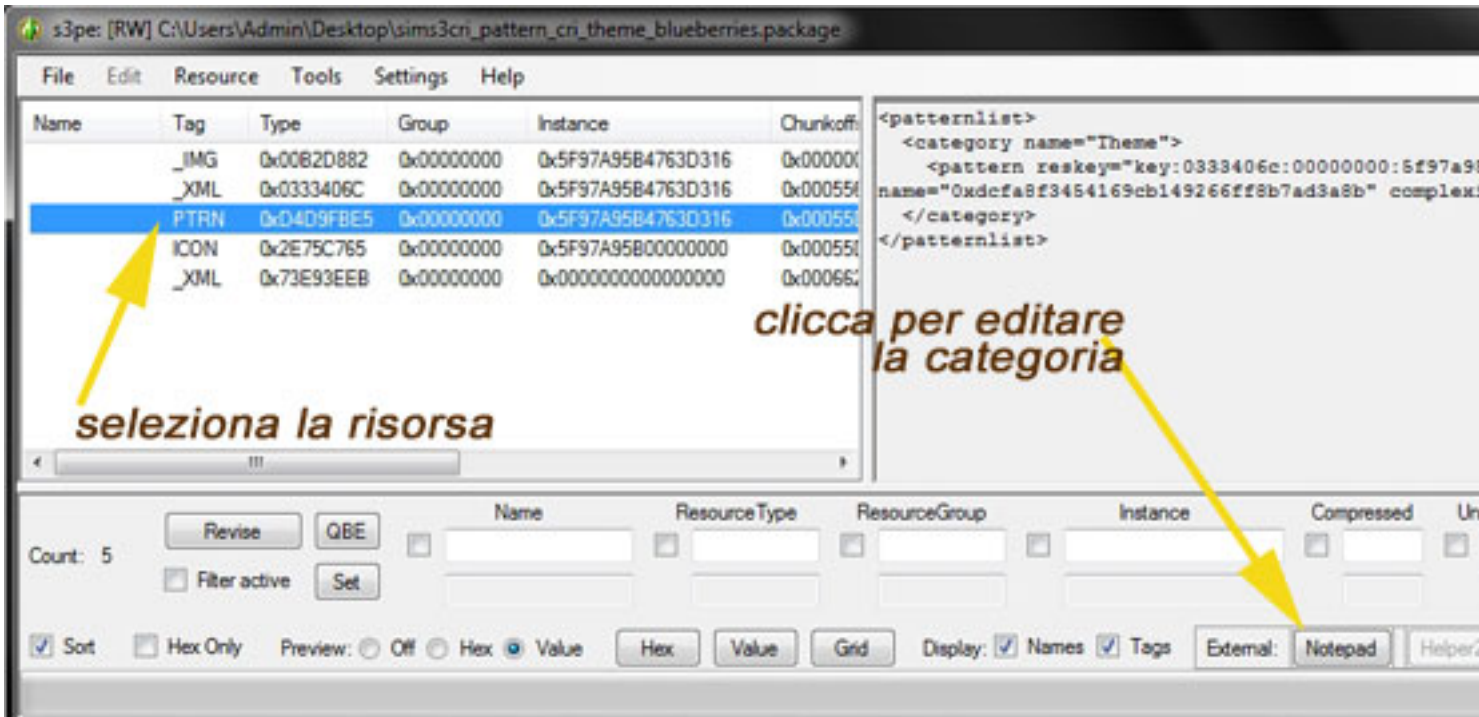

TAG = PTRN

Type = 0xD4D9FBE5

Select it and on bottom you will see a button **Notepad** near to *External*.

Edo a fabric e clicca il tasto editare in alto a destra. Modifica il nome della categoria in Fabric. Poi clicca il tasto OK. Invece di Fabric, puoi mettere qualsiasi nome che preferisci. Poi clicca il tasto OK. Invece di Fabric, puoi mettere qualsiasi nome che preferisci. Poi clicca il tasto OK.
